

GPS input for M802

The GPS input for the M802 requires a GGA word from a NMEA 0183 Version 3.01 only. No other version will work.

While some equipment can provide a modified version of NMEA 0183 which has an increased speed of to 38,400, it is called NMEA 0183HS for High Speed. NMEA 0183HS is typically used for AIS equipment only.
